EXPERIENCE

Moody's | *Associate Software Engineer (Full-Time)*

Sep. 2025 – Present

Insurance risk and scenario modelling software for insurers

- Contributed to frontend and backend systems of a distributed scenario generation platform, implementing validation logic, UI enhancements, and workflow improvements across Azure web and function app components.
- Contributed to the design and implementation of a greenfield export service. Developed the core function app, added test coverage, and implemented streaming-based file-processing workflows, while designing decoupled interfaces to support cloud-agnostic integrations across AWS and Azure environments.
- Expanded numerical regression and end-to-end test coverage in collaboration with quants. Improved confidence in model-driven workflows and reduced regression risk in production-facing systems.
- Contributed to legacy financial tooling, including Excel-DNA applications and proxy generation systems used for calibration workflows and long-running financial calculations.
- Resolved Snyk-reported dependency vulnerabilities, upgraded packages, and investigated production bugs to improve security, stability, and maintainability.
- Built internal AI-assisted tooling to support engineering workflows, including a team skill marketplace and a PR-checker skill to help non-developers follow development conventions.

Adimo | *Junior Software Engineer (Full-Time, Remote)*

Jan. 2025 – July. 2025

Adtech SaaS company providing shoppable media integrations for global brands

- Delivered and maintained data ingestion pipelines and customer-facing interfaces that power client-facing product touchpoints.
- Engineered robust Playwright scrapers that bypassed anti-bot protections across 50+ retailer sites, increasing scrape reliability and minimised manual intervention.
- Supported and enhanced legacy touchpoints, troubleshooting UI/API issues and deploying hotfixes to maintain 24/7 uptime.
- Wrote clear internal documentation that reduced onboarding time for new engineers and improved knowledge sharing across the team.
- Role made redundant following company downsizing.

PROJECTS

Gris-Lang | *Java*

Sep. 2023 – May. 2024

- Designed and implemented Gris, a high-level Java-based programming language with custom syntax and semantics for real-world use cases.
- Built core compiler components (lexer, parser/AST, resolver, type checker, interpreter) and validated them via a comprehensive JUnit test suite.
- Authored full documentation and user guides to streamline onboarding and adoption by other developers.

EDUCATION

University of Strathclyde

Bachelor of Science in Computer Science With Honours

Glasgow, Scotland

Sep. 2020 – Jun. 2024

TECHNICAL SKILLS

Languages: C#, TypeScript, Java, Python, SQL

Tools & Frameworks: .NET, AngularJS, Playwright, Git
